ESHERIA
LEGAL WORKFLOW OS

CONFIDENTIAL

EXECUTIVE PRESENTATION · CEO STRATEGIC REVIEW

From Fragmented Capabilities to a Legal Workflow OS.

The strategic case for building the orchestration layer above Esheria's five existing services.

PREPARED BY

Vincent Nyamao

CEO Review · March 2026

Architecture Review Package: Proposal · Blueprint · Diagram Pack · Design Appendix

5
Existing Services
Connected, not rebuilt

9
Canonical Entities
Locked in Phase 1

18+
Weeks to Pilot
Greenlight to B2B

1
MVP Workflow
Proves the whole thesis

TODAY'S AGENDA

12 slides · ~20 minutes

01 The Strategic Problem

Why five capabilities isn't a platform

02 The Platform Thesis

What the orchestration layer unlocks

03 Platform Architecture

Five layers, zero rebuilds

04 The MVP

Contract intake end-to-end

05 Decision Metrics

How we measure the shift

06 Roadmap & The Ask

18–27 weeks to pilot. Four decisions.

// SECTION 01

The Strategic Problem

Five capabilities. No shared state. No platform.

OCR & Ingestion
esheria-ocr
ISOLATED

Contract Compliance
contract-engine
ISOLATED

Research & Retrieval
esheria-ai
ISOLATED

AI-Assisted Drafting
lexdraft
ISOLATED

Analytics Infra
esheria-analytics
ISOLATED

No shared data model. No workflow state. No approval chains. No audit trails. Five products, not one platform.

// THE ENTERPRISE BUYER REALITY

What legal teams actually buy at scale

WHAT ESHERIA OFFERS TODAY	GAP	WHAT ENTERPRISE TEAMS REQUIRE
Features without shared workflow state	→	✓ **Repeatable, auditable workflows**
Auth model varies by product surface	→	✓ **Role-based access & org controls**
No integrations systematised	→	✓ **DMS, CRM, ERP integrations**
No approval chains as primitives	→	✓ **Approval chains & escalation**
Analytics internal to Esheria only	→	✓ **Institution-facing analytics**
Output-only, no citation linkage	→	✓ **Evidence-backed AI outputs**
No audit trail first-class	→	✓ **Compliance & audit trails**

// SECTION 02 · PLATFORM THESIS

Esheria as the Legal Workflow Operating System

FROM

Five isolated AI capabilities with no shared layer

→

TO

A programmable legal operations platform — the OS for legal work

Workflow Depth

Switching cost no feature creates

Ontology Lock-in

Define objects, become irreplaceable

Audit Memory

Logs compound into institutional assets

Platform Narrative

More fundable. More expandable.

Five layers. Existing repos unchanged.

L5 — **EXPERIENCE**

Institution Workspace · Operator Console · Public Surface

L4 — **CONTROL PLANE**

Workflow Engine · State Machine · Approval Router · Audit Log

L3 — **OBJECT MODEL**

Canonical Entities: Org · Matter · Document · Clause · Risk · WorkflowRun

CONTROL PLANE ABOVE — DATA PLANE BELOW

L2 — **CONNECTORS**

OCR · Contract · Research · Drafting · Analytics Connectors

L1 — **EXISTING REPOS**

esheria-ocr · contract-engine · esheria-ai · lexdraft · esheria-analytics

PRINCIPLE Existing repos plug into L1 as-is. The orchestration layer is built above them. Zero rebuilds.

// CANONICAL OBJECT MODEL — 9 ENTITIES

The shared data contract. Locked in Phase 1. Never mutated within a major version.

E1 Organization

org_id · name · sector · policy_set

E2 User

user_id · org_id · role · permissions

E3 Matter

matter_id · org_id · type · status

E4 Document

doc_id · matter_id · ocr_status

E5 Clause

clause_id · doc_id · type · risk_ids

E6 Risk

risk_id · clause_id · severity

E7 WorkflowRun

run_id · matter_id · step · status

E8 Action

action_id · run_id · input · output

E9 Review

review_id · doc_id · decision

Contract Intake & Review — 10 steps. All 5 services. One audit trail.

01 User
Upload contract
→ Document + WorkflowRun

02 Ingestion Op
OCR + validate + classify
→ DocumentVersion

03 Extraction Op
Extract clauses & obligations
→ Clause[]

04 Compliance Op
Check policies & regulations
→ Risk[]

05 Research Op
Retrieve precedents + citations
→ Citation[]

06 Drafting Op
Generate fallback language
→ Draft suggestions

07 Review Op
Compile briefing + score risk
→ Review record

08 Human Reviewer
Decide + annotate
→ Decision on Review

09 Routing Op
Approve or escalate + SLA
→ Approval + SLA

10 Analytics Op
Emit events + update dashboards
→ Analytics updated

Four metrics. Before vs After.

	CURRENT STATE	TARGET STATE
Workflow Throughput	Per-service, per API call — no end-to-end measurement	End-to-end per tenant — matters closed, SLA rate
Compliance Assurance	Point-in-time checks, no audit chain between steps	Risk linked to clause → citation → decision → timestamp
Platform Leverage	Feature-by-feature value, no compounding	OS-level retention — workflow depth = switching cost
Enterprise Sales Motion	Individual user demo-by-demo acquisition	Org subscription — Head of Legal, CCO, procurement

18–27 weeks from greenlight to first B2B pilot

P0 — Validation & Alignment
2–3 wks

- CEO alignment
- Scope definition
- Repo readiness audit
- Success criteria

P1 — Design
3–4 wks

- Canonical schema lock
- State machine design
- API contract spec
- Auth/tenant model

P2 — MVP Build
6–8 wks

- Workflow Engine
- 3 connectors
- Reviewer dashboard
- Audit log

P3 — Internal Pilot
3–4 wks

- Real scenarios
- Refinement
- Operator console v1
- Performance baseline

P4 — B2B Launch
4–6 wks

- Target customer
- Onboarding flow
- Institution analytics
- Pricing model

TOTAL 18–27 weeks from greenlight to first B2B pilot conversation

// THE ASK · FOUR DECISIONS

Not a rebuild. Four specific greenlight decisions.

1 Strategic Alignment

Confirm the platform direction — Esheria as a programmable legal workflow OS — is the right strategic bet for this growth phase.

2 MVP Greenlight

Approve Phase 0 through Phase 2: validation, design, and MVP build culminating in a live Contract Intake & Review demo.

3 Platform Ownership

Name a platform lead to coordinate across existing repo owners. Without this single point of ownership, the orchestration layer will stall.

4 Pilot Target

Identify one B2B customer type or named prospect as the north star for MVP and B2B packaging phases.

ESHERIA

LEGAL WORKFLOW OS

5	9	18+
Services	Entities	Weeks

We are not asking to rebuild Esheria.

We are asking for permission to prove that what Esheria has already built can operate as one coherent system —

and that this coherence creates the enterprise story that drives the next phase of growth.

FOUR DECISIONS NEEDED:

1. Strategic Alignment
2. MVP Greenlight
3. Platform Ownership
4. Pilot Target
